

Submission folder — read this first

Everything you need to ship the LongTail Scout submission for the Bright Data Web Data UNLOCKED hackathon.

Deadline: 2026-05-30.

Do this, in order

0. **feature-guide.md** — **Read this first if you don't know all the features.** Complete inventory of everything the app does (incl. the v1.2–1.7 intelligence suite), where each lives, what to say, plus a ~3–4 min extended walkthrough. This is your master reference.
1. **demo-checklist.md** — Run this 20 min before you record. Pre-flight checks + cache pre-warm. **Do not skip.**
2. **video-script.md** — The tight 90-second recording (scout + Niche Recon). Exact words + clicks, second-by-second. For a longer video that shows the new features, use the extended cut in `feature-guide.md`.
3. *(optional)* **slides-outline.md** — 8-slide deck. lablab doesn't require it, but it's useful supporting material for the partner-prize judges (Bright Data, Cognee, Speechmatics). Paste into Google Slides / Figma / Canva.
4. **lablab-submission.md** — The form text. Every lablab field has a ready-to-paste block. Open the form at <https://lablab.ai/event/web-data-unlocked-hackathon/submissions> and copy each block into the matching field.
5. **Submit.** Hit the green "Submit" button on lablab. Save the receipt email.

Time budget

If you're starting from a cold morning:

Task	Time
demo-checklist.md pre-flight + cache warm	20 min
Read video-script.md start to finish once	5 min
Practice run (no recording)	5 min
Record + re-record if needed	30 min
Edit + trim + upload to YouTube unlisted	30 min
Fill in lablab form from lablab-submission.md	15 min
Final review + submit	10 min
Total	~2 hours

What's already done

- Live site deployed: <https://longtailscout.com>
- GitHub repo public: <https://github.com/dholzric/longtail-scout>
- Demo password: Piglet (set as DEMO_PASSWORD env on the Worker)
- All 4 High + 5 Medium + 1 Low Codex security findings closed, plus a bridge SSRF fix
- 118 unit tests passing
- 12 MCP tools live
- Niche Recon shipped + pre-warmed
- v1.2–1.7 intelligence suite shipped & live-tested: Apollo-blind LinkedIn verification, contact discovery, decision-maker finder, signal radar, account-brief export, "Act first" trigger feed (all Bright-Data-backed). See feature-guide.md .
- Current version: v1.7.2 (shown in the footer + /api/health)

You just need to: record the video, fill the form, hit submit.

What's NOT done

- The video itself (you have to record it — only you can do this part)
- The lablab form submission (only you can submit; it's account-tied)
- The screenshot for slide 3 and slide 7 if you choose to use the deck (one minute in Loom / Snip)

If you hit a problem

- **Site is down on demo day** — check `npx wrangler deploy` from `worker/`, and `curl https://longtailscout.com/api/health`.
- **Bridge / demand server is down** — SSH to `.29`, check `systemctl status longtail-scout-bridge` and the demand-API service.
- **Live scout is slow** — re-run the curl pre-warm in `demo-checklist.md` step 2.
- **Niche Recon returns 0 niches** — wait 60s and retry; if still failing, switch demo product description per `demo-checklist.md` step 2.

You can also fall back to `?sample=1` mode for a guaranteed deterministic demo replay.
