The buyer's problem

Why Apollo and ZoomInfo miss the long tail.

GTM teams at ServiceTitan, AccuLynx, JobNimbus, Brightwheel, Jobber, Bambee, and Toast chase the same kind of account: small, local, operator-owned, web-first. Real revenue. Real budget. No LinkedIn corporate page. No Apollo record.

- One SDR builds about 10 qualified accounts a day by hand.
- \$300 per account just to find them, before outreach begins.
- Long-tail operators live on their own websites, booking pages, and local web signals — not the LinkedIn employee graph.

10/day
qualified accounts built by hand

\$300
to find one account

0
help from Apollo here

Two databases. Same query. Different worlds.

Apollo's graph is the LinkedIn-employee-profile graph. Long-tail operators don't live there. We crawl the open web in real-time and rank what's actually a fit.

8/8 operators whose primary signal is their own website	0 actively hiring (trigger event)	0 open roles surfaced from ATS pages	0 live citations linked back to BD fetches
---	---	--	--

SIDE A

Apollo · ZoomInfo · Clay

MISSES

What an Apollo "roofing contractors in Houston, 10-50 emp" filter actually returns:

01	Power Home Remodeling \$1B+ national installer; already saturated, not a SaaS lead	SATURATED
02	Home Depot Roofing Installations Big-box channel; not the indie contractor your sales team needs	FRANCHISE
03	Erie Home National brand; already in every prospecting tool	SATURATED
04	John Smith Roofing Sales (LinkedIn) Individual profile, not a company; last activity 2019	STALE
05	HomeAdvisor / Appli	AGGREGATOR

SIDE B

longtailscout .com

FINDS

Top-ranked operators surfaced from this run — each with a hiring signal, an ICP-fit reason, and a per-row sales angle:

01	Braun's Roofing braunsroofing.com Family-owned, 35+ years, residential roofer, A+ BBB
02	Moss Roofing Company Houston mossroofinghouston.com Residential roofing, 100+ employees, blog active
03	Rose Roofing roseroofing.com Residential roofer, 100+ employees, multi-location
04	Rlynt Roofing rlyntroofing.com Storm-restoration specialist, hail damage, free inspections
05	Stone Castle Roofing stonecastleroofing.com

Live "Apollo gap" comparison from the product

The product

Type a niche × city query. Get a ranked, cited, evidence-backed list of operators in ~40 seconds.

EXAMPLE QUERY

roofing contractors in Houston

- 8–10 ranked operators
- Company name + homepage URL
- Hiring signals scraped from the careers page
- Recent activity headlines from press / blog
- Public-footprint size estimate
- One-sentence sales angle generated from scraped facts
- Every claim citation-linked to the source URL
 - ~\$0.20 a scout — about 1,500× cheaper than the ~\$300 an SDR spends by hand.

Per-row drill-down shows underlying Bright Data fetches inline. The on-page map plots operators against a heat layer of every other business in the demand index for that niche.

§ 01 — THE QUERY

One niche, one city.

The scout fires 3–4 parallel Bright Data SERPs, renders each candidate's homepage + careers + news, and ranks. Every fact below is footnoted back to the fetch that produced it.

🔍 NICHE × CITY
roofing contractors in Houston
🔑 ⌵ + ⌵

TRY: 🏠 Roofing · Houston ❄️ HVAC · Dallas 🦷 Dental · Houston 👶 Childcare · Austin ⚖️ Law firms · CA
🏠 MSPs · Florida 🔧 Auto repair · Atlanta 🏨 Hotels · Miami

How Bright Data powers it

Three-phase hybrid agent pipeline. Bright Data is the spine.

01 DISCOVERY

LLM fires 4 parallel SERP queries: direct, hiring, news, suppliers.

Brave SERP API → DDG → Bright Data Scraping Browser cascade. BD handles long-tail queries Brave misses.

02 ENRICHMENT

For each candidate: render homepage, careers, and news.

Bright Data Scraping Browser handles J S-heavy ATS pages like Greenhouse, Lever, and Workday.

03 SYNTHESIS

DeepSeek ranks, scores ICP fit, and writes citation-grounded sales angles.

BD-sourced evidence becomes live citations and row-level drill-down traces.

BRIDGE SERVICE

Tiny Playwright bridge on the home server connects to Bright Data's WSS Browser API and exposes /render +/serp +/screenshot as HTTP for the Worker. One BD zone (its_browser) handles render, SERP, and screenshots with mutex serialization.

● live edition 2026.05 · field manual for the long tail BD \$0.0150 (3 renders) LLM \$0.0026 (5.8k tok)

037.6s · Enriched 8 of 21.

037.6s ► synthesis — phase begins

048.1s · Niche "roofing" has 82,430 matching businesses in the demand index.

054.0s · Synthesis via deepseek

065.3s · Watchlist hit: 5 new operator(s) since last run (was 19).

Live trace: Discovery → Enrichment → Synthesis, streamed from the worker

The killer differentiator: Niche Recon

The feature Apollo physically cannot replicate.

APOLLO CAN'T SEE THIS

Paste a product description. Get the top 5 long-tail verticals to hunt in.

- Map the product description to candidate verticals via LLM.
- Cross-reference each vertical against the private 7M-business demand index.
- Rank by Apollo-thinness: share of businesses with no own-domain website.
- Booking platforms, social profiles, and Google pages make operators invisible to Apollo's domain-match enrichment.

PLATFORMS THAT HIDE OPERATORS FROM APOLLO

Booksy · Boulevard · ServiceTitan · Vagaro · Facebook · Instagram · Yelp · Google Business Profile

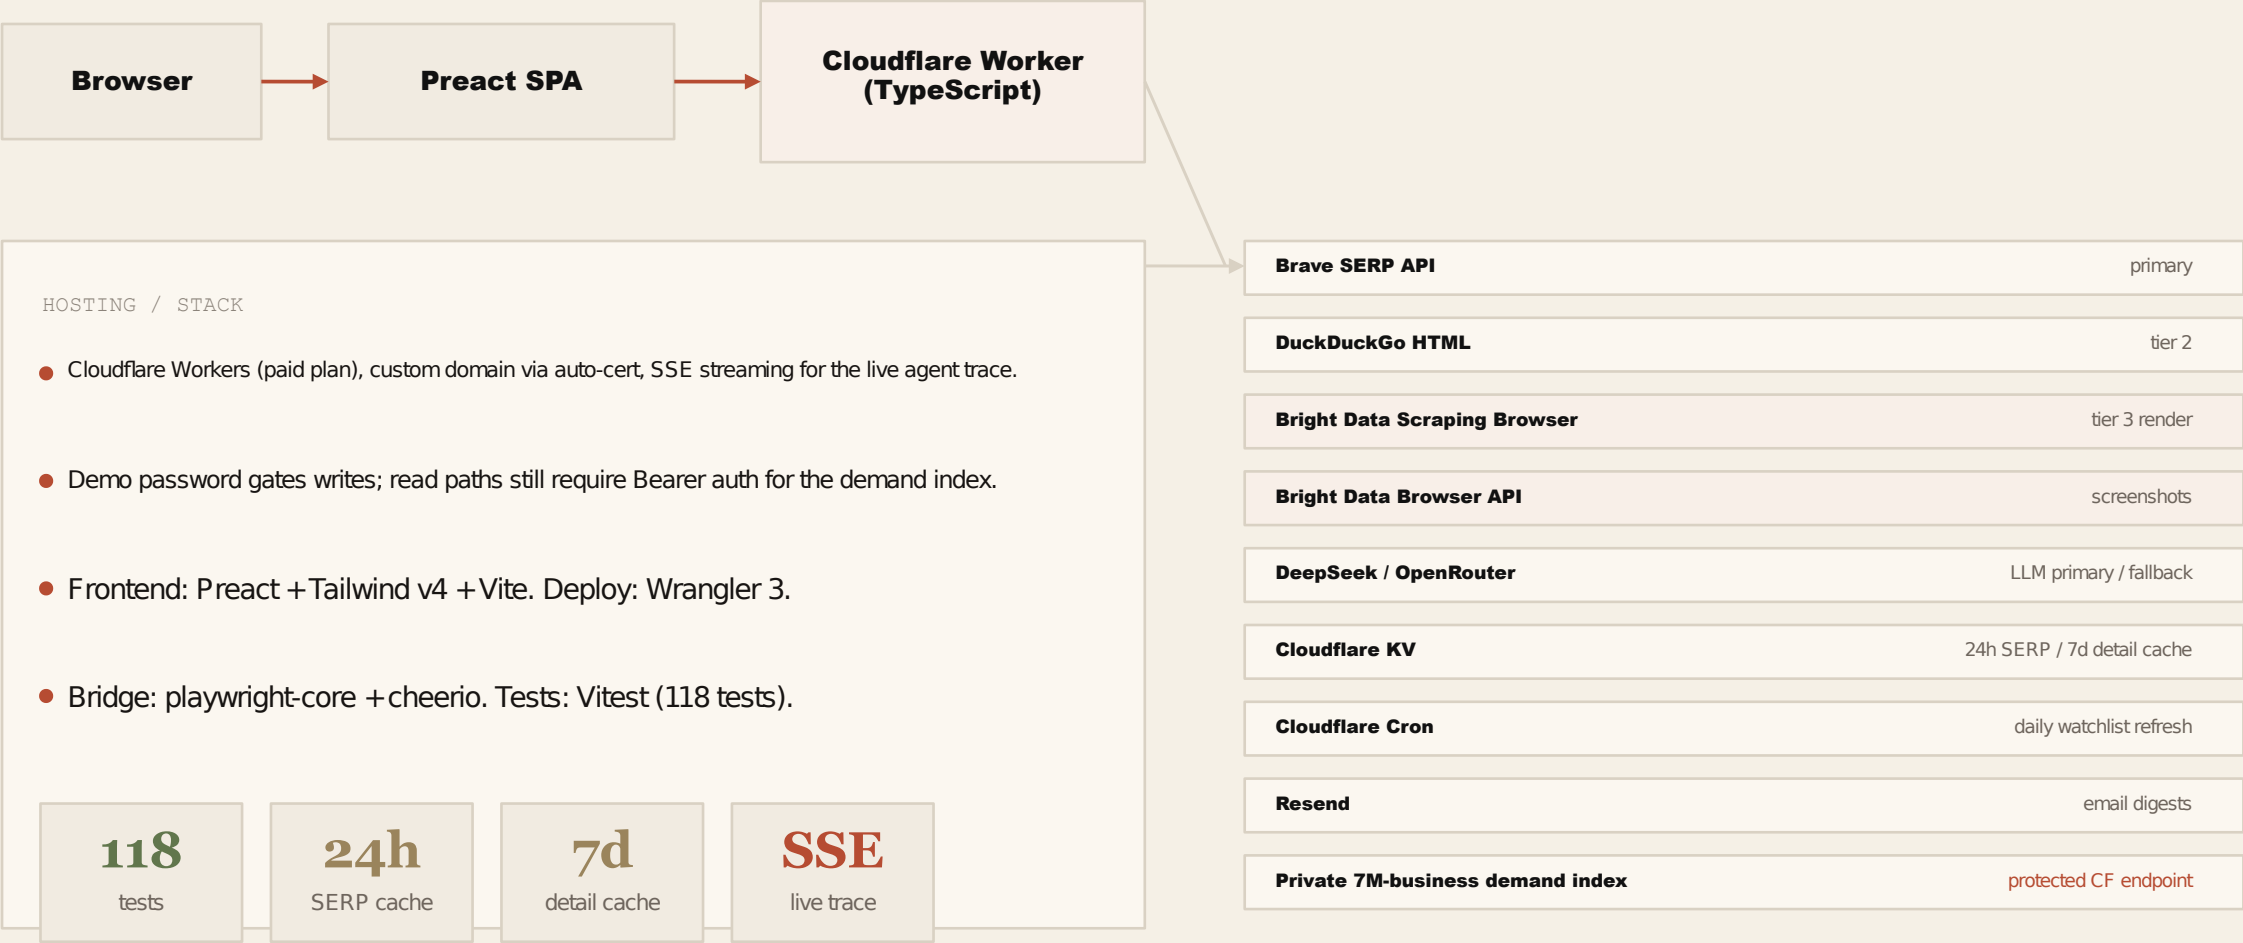

EXAMPLE OUTPUT · PRODUCT = "home services CRM for trades"

NICHE	BUSINESSES	APOLLO-THIN
electrical	16,666	100% (every one uses ServiceTitan booking)
hvac	42,873	86%
pool service	10,752	76%
plumbing	46,264	50%

This is the moat. Apollo does not have the demand index. Without the index, this feature does not exist.

Architecture

Cloudflare-native, data-powered, and built for live scouting.

Beyond the demo: MCP, watchlists, security

The find → prove → reach → act loop — production surface that keeps compounding.

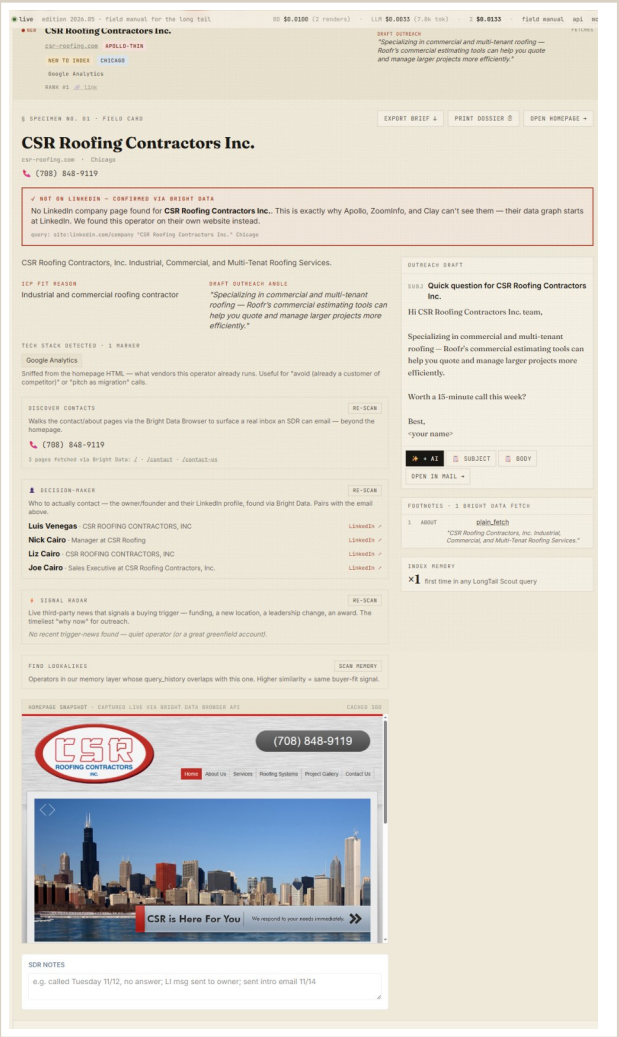

MCP SERVER AT `/api/mcp`

12 tools any MCP-aware client can call:

scout	niche_recon
find_businesses	demand_count
operator_screenshot	draft_email
linkedin_check	find_contacts
decision_maker	signal_radar
rank_triggers	account_brief

WATCHLISTS + ALERTS

Save a query. A daily cron refreshes the demand-index count. Resend email digests + Slack / Discord webhooks fire when delta > 0. Every digest has an HMAC-signed unsubscribe link for CAN-SPAM compliance.

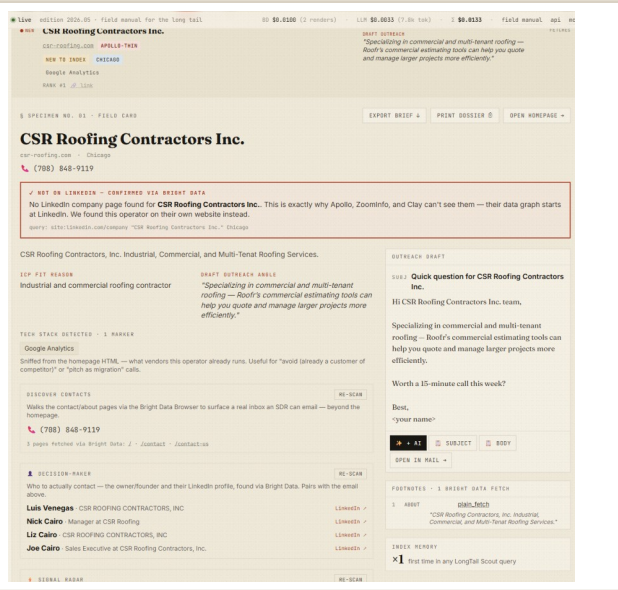

Full field card — not on LinkedIn (proven), contacts, decision-maker, outreach

SECURITY

118 unit tests covering SSRF guards on both the worker and the bridge, HMAC unsubscribe tokens, watchlist PII redaction, platform-host filters, and every new classifier.

Two external code reviews (Codex). 10/10 findings closed. Full live burn-test of all endpoints + MCP tools.

Apollo-blind proof: not on LinkedIn — owner + direct contact via Bright Data

What's next + thanks

The net-new-account engine for every vertical-SaaS GTM team.

NEXT 30 DAYS

CRM connectors HubSpot, Salesforce, Apollo CSV reverse-import

Quality mode Opt-in BD-bridge enrichment to recover the ~35% of candidates plain-fetch drops

Vertical-tuned prompts Roofing, HVAC, childcare, EMS — different hiring-signal weights by market

Bright Data MCP Server Migrate once it is GA, deprecate the Playwright bridge, call BD directly

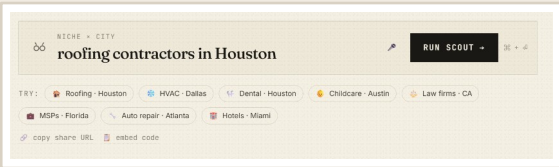

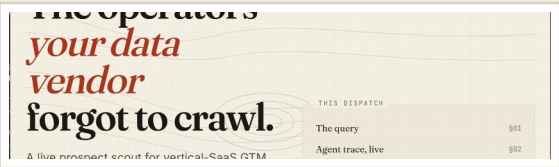

THANKS TO

Bright Data for the Scraping Browser product and the hackathon promo credit

Cloudflare for Workers, KV, Tunnels, and custom-domain auto-cert

DeepSeek for cheap, fast tool-use LLM performance — primary all the way

lablab.ai for running the hackathon
